

Residential Threat Assessment

4889 East Lake Harriet Parkway, Minneapolis, Minnesota 55419. Personal residential due-diligence. Principal question: whether a solo run on the parkway at 05:30 is safe.

DOCUMENT PI-2026-RSA-001 · Rev B	WINDOW 14 Sep 2025 to 14 Sep 2026	ISSUED 14 Sep 2026	RISK TIER Tier 3 · MODERATE	ANNEX PI-2026-RSA-001-A
-------------------------------------	--------------------------------------	-----------------------	--------------------------------	----------------------------

01 EXECUTIVE SUMMARY

TIER 3 · MODERATE · COMPOSITE 36 / 100

The residence is low risk and the run is where the risk sits. Residential and ambient-neighborhood exposure both score in the LOW band, and the composite is carried almost entirely by one activity-specific vulnerability: solo, pre-dawn, fixed-route running in full darkness across a seam between two patrol jurisdictions. Section 05 demonstrates this arithmetically. Holding every other input constant and removing the pre-dawn run drops the composite to 26, which is Tier 4 LOW. No verified violent incident occurred on the Lake Harriet parkway inside the assessment window, and that is an absence of reporting rather than a certification of safety.

02 SITE PROFILE [V]

Structure	Approximately 7,606 square feet, built 2020 on a 1907 teardown
Marketed value	\$3.7M to \$4.9M across multiple 2025 and 2026 MLS numbers
Neighborhood	Lynnhurst and East Harriet boundary, Auditors Subdivision 189
Housing stock	~120 square blocks, ~80% pre-1940, ~8 to 10% rental
Police jurisdiction	Minneapolis Police Department (MPD) 5th Precinct, Inspector James Novak
Parkway jurisdiction	Minneapolis Park and Recreation Board (MPRB) Park Police
Ward	Ward 13, Council Member Linea Palmisano

The jurisdictional split is the single most consequential fact on this page. The residence sits under MPD. The running surface does not. Lake Harriet and its parkways are Park Board property patrolled by MPRB Park Police, whose Park Patrol Agents concentrate on lakes and parkways during summer months (MPRB, Park Police and Safety). A pre-dawn run in winter therefore sits at the thinnest point of both coverages at once. PI assesses this seam as the structural driver behind the Section 05 score, and notes that no data request addressed to MPD alone will describe it.

03 THREAT ENVIRONMENT

Statewide and citywide trend lines point down. Two categories point up, and they are the two that matter here. Minnesota violent crime fell to 226 per 100,000 in 2025, the lowest rate since 2019 (Minnesota Bureau of Criminal Apprehension, Uniform Crime Report 2025). The Bureau subsequently issued an amended 2025 report revising statewide murders from 130 to 132 after Brooklyn Park homicides and Champlin aggravated assaults went unreported in the original filing (Minnesota Department of Public Safety, Sep 2026). Cite the amended figures. Minneapolis recorded roughly 50 fewer shootings and one third fewer robberies in 2025 against 2024 (Star Tribune, 2026).

OFFENSE, MINNEAPOLIS	H1 2025	H1 2026	CHANGE	NATIONAL, 66 CITIES	PI READING
Homicide	26	25	-3.8%	-17.2%	Down, below national pace
Robbery	502	404	-19.5%	-16.6%	Down, ahead of national pace
Rape	214	252	+17.8%	-6.2%	Diverges upward
Aggravated assault	1,346	1,518	+12.8%	-5.7%	Diverges upward

Source: Major Cities Chiefs Association, Violent Crime Report, 2026 and 2025 Midyear, released 1 Aug 2026; reported by KSTP, Aug 2026. [V]

PI assesses the two rising categories as the most activity-relevant lines in this assessment, because both describe person-on-person offenses against individuals rather than property. Both run counter to the national direction, which removes the option of explaining them away as a national artifact. This is a citywide signal and not a Lake Harriet signal: no in-window parkway incident supports localizing it. It is the strongest available argument against reading the lake's clean in-window record as dispositive.

04 INCIDENT HISTORY

Zero verified violent incidents on the Lake Harriet parkway fall inside the assessment window. Every located incident predates it. The in-window record consists of property crime only.

DATE	INCIDENT	IN WINDOW	WEIGHT ASSIGNED
Late Aug 2026	At least 87 vehicles damaged in one night across 9 Minneapolis locations, 02:00 to 07:00, no arrests announced at the time (Star Tribune, 28 Aug 2026)	Yes	Category A only. Parked vehicles, not persons
2025 to 2026	Overnight window-smashing reaches Linden Hills, northwest of the lake. MPD 5th Precinct investigations attributes the pattern to one juvenile group active citywide (Star Tribune; KSTP)	Yes	Proximity only

2 Sep 2026	Loring Park mass shooting, 2 killed, suspect dead, 6 injured including officers (MPR News, Sep 2026)	Yes	Excluded. 1st Precinct, 4 miles
27 Aug 2025	Annunciation church shooting, Windom, approximately 1.5 miles. Drives the 5th Precinct year-over-year shooting-victim increase single-handedly	No, just outside	Excluded. Not a distributed local rise
Oct 2023	Officer-involved shooting at the Lake Harriet band shell boat launch, approximately 23:56. Park Police chief characterized the location as "extremely isolated" (CBS Minnesota; MPR News)	No	The isolation finding is durable and carries forward
Apr 2023	Two vehicle-based robberies minutes apart, midday, 4500 block Aldrich Avenue South, approximately 6 blocks off the lake (CBS Minnesota)	No	Midday and vehicle-borne. Not pre-dawn relevant
Jul 2017	Approximately 9 indecent-exposure and grab reports across the Harriet and Nokomis corridor over several weeks, final two escalating to contact (CBS Minnesota)	No	Establishes an escalation pattern in this corridor
Sep 2015	Solo runner grabbed from behind and briefly chased at 05:30, West Lake Harriet Parkway near Sheridan Avenue South (WCCO / CBS Minnesota)	No	Exact time, place and activity match. Single point, over 10 years old. Establishes feasibility, not frequency

05 SCORED MATRIX

Analyst judgment adapted from the Best Buy executive-protection threat matrix. Factors score 0 to 100, where 0 is no exposure and 100 is maximum. Category score is the unweighted mean of its factors. Composite is the weighted sum of the three category scores. Factors carrying an unresolved collection gap are scored conservatively and marked [?].

FACTOR	SCORE BASIS
A · SITE AND PROPERTY	31 Weight 25% · contributes 7.75
Structural and occupancy baseline	15 2020 construction, owner-occupied single family [V]
Target appeal: publicly marketed high-value residence	55 Full interior photography indexed against a named address [A]
Perimeter and approach exposure	24 Parkway frontage, open lakeside approach [A]
Ownership and occupancy record clarity [?]	30 Aggregator 2018 sale conflicts with active 2025 and 2026 re-listings
B · THREAT INTELLIGENCE	32 Weight 32% · contributes 10.24
Ambient neighborhood violent crime	10 Among the lowest-crime areas of Minneapolis [S]
Citywide violent-crime trajectory	45 Rape and aggravated assault diverge upward, Section 03 [V]
Local property-crime pattern	55 Active, escalating, in-window, no enforcement resolution [V]
Verified in-window incidents at subject location	8 Zero located. Floor reflects reporting gaps, not certainty [?]
Historical activity-matched precedent	42 Sep 2015 exact match plus Jul 2017 escalation series [V]
C · VULNERABILITY AND ENVIRONMENTAL	43 Weight 43% · contributes 18.49
Activity exposure: solo, pre-dawn, full darkness	60 No companion, no witnesses, seasonal darkness for the whole run [A]
Route predictability	55 Fixed route at a fixed time. The most controllable factor scored [A]
Patrol coverage seam	48 MPD and MPRB boundary, Park Patrol weighted to summer [V]
Lighting and sightlines [?]	42 Unverified. Scored conservatively pending physical recon
Offender-presence window overlap	28 Break-in crews operate 02:00 to 07:00. Encounter, not violence [A]
Communications and response	25 Populated residential corridor, carry-phone assumed [A]
COMPOSITE (0.25 × 31) + (0.32 × 32) + (0.43 × 43)	36 TIER 3 · MODERATE

Sensitivity test: remove the pre-dawn run. Categories A and B are unchanged, since neither depends on the activity. Category C reduces to its ambient environmental residue, approximately 18, once activity exposure, route predictability and offender-window overlap fall away and the patrol seam stops applying to a resident who is indoors at 05:30. The composite becomes **(0.25 × 31) + (0.32 × 32) + (0.43 × 18) = 26**, which is **Tier 4 LOW**. One behavior moves this assessment across a tier boundary. Nothing else in the matrix does.

06 BANDING AND INSTRUMENT LIMITS

COMPOSITE	TIER	LABEL
81 to 100	1	CRITICAL
61 to 80	2	HIGH
36 to 60	3	MODERATE
21 to 35	4	LOW
0 to 20	5	MINIMAL

This instrument is directional and not calibrated. A composite of 36 sits one point above the Tier 4 boundary. Rev A of this assessment scored 34, inside Tier 4 LOW. The movement to 36 reflects the H1 2026 divergence in rape and aggravated assault plus confirmed persistence of the property-crime pattern, offset by withdrawal of a misdated carjacking statistic (see Annex A). That movement is within the instrument's noise, and a two-point swing should not be read as a change in the security picture. **The finding is the band and the reason for it, not the number.**

07 KEY ANALYTICAL FINDS

- **A misdated statistic was withdrawn.** Rev A carried a Southwest Voices figure, "5 of 7 carjackings ringing Lake Harriet occurred Nov 14 to 25," as in-window. It dates to November 2021, roughly four years outside the window. Corroborated by Axios Twin Cities (9 Nov 2021), MinnPost (Nov 2021) and the Star Tribune 2021 carjackings-by-neighborhood map. Tagged [S] rather than [V]: the byline could not be inspected directly. Full detail in Annex A.
- **Enforcement will not resolve the property-crime pattern.** Minnesota's "Raise the Age" law took effect 1 Aug 2026. Children under 13 cannot be charged, prosecuted or detained, with no exceptions (Star Tribune; CBS Minnesota, Jun to Aug 2026). Offenders in the local sprees have included 11-year-olds. PI assesses the pattern as persistent for the foreseeable window.
- **The property-crime pattern does not threaten a runner, and was not permitted to inflate Category C.** The 02:00 to 07:00 overlap is scored at 28 as an *encounter* consideration. These offenders target parked vehicles and disperse from people. The correct response to an encounter is distance and disengagement, never confrontation.
- **An activity-matched in-window assault occurred elsewhere in the metro.** A lone woman was assaulted on an early-morning trail inside Elm Creek Park Reserve on 31 Aug 2026 and the suspect was not apprehended (Hoodline, Aug 2026). Maple Grove is approximately 15 miles northwest, a different jurisdiction and a different park system. It contributes **nothing** to this location's base rate and is excluded from Section 05. It is recorded because it matches the activity profile being scored.
- **One counterweight cuts against the darkness assumption.** National reporting citing Federal Bureau of Investigation framing notes that assaults on runners frequently occur in daylight and taper in early-morning hours. PI retains this rather than discarding it. It is national and general, and it is not evidence about this parkway.

08 COLLECTION GAPS

PRIORITY	GAP	STATUS AND ROUTE TO CLOSURE
HIGH	Incident-level data, quarter-mile radius, 365 days	Open. Geofenced query against the City of Minneapolis ArcGIS FeatureServer (organization 79kfd2K6fskCAkyg , layers crime_data_2025 and Police_Incidents_2026) could not be executed: the working environment's egress policy returns 403 for services1.arcgis.com and opendata.minneapolismn.gov . Query is written and staged in COLLECTION-STATUS.md
HIGH	Two data practices requests, not one	Open. A Minnesota Government Data Practices Act request to MPD Records covers the residential blocks and misses the parkway. A parallel request to MPRB is required (Responsible Authority: Jennifer Ringold). Both drafts are staged, and the MPRB draft includes a patrol-hours element for 04:00 to 07:00, which would measure the Section 02 seam rather than infer it
HIGH	Physical route reconnaissance	Open, owner-only. Walk or drive the intended route once at 05:30 in the current season. Lighting, sightlines, cover, isolated stretches, phone signal. Seasonally dependent: a summer recon does not answer a November question. This gap is why the lighting factor is scored conservatively at 42
HIGH	Resident-forum layer	Open, owner-only. Nextdoor 55419 and Reddit require an authenticated browser session. No browser-automation tooling carrying the owner's session is available, and both domains are blocked at the egress proxy. Search strings staged in Annex A
MED	Predatory-offender proximity	Open. Minnesota Department of Corrections Level 3 registrant search and Bureau of Criminal Apprehension non-compliant search, run against the address. Interactive lookups
MED	Ownership and occupancy conflict	Open. Hennepin County property and recorder portals
LOW	Southwest Voices byline verification	Open. Would upgrade the Section 07 correction from [S] to [V]

09 OUTSTANDING QUESTION

The rape-category increase in Section 03 is the most activity-relevant trend line in this assessment, and its weight depends on the runner's own risk profile, which is not on record in this file. PI flags this as [?] and recommends resolving it before the assessment is treated as final. No other open item changes the tier.

10 SOURCES

Major Cities Chiefs Association, Violent Crime Report, 2026 and 2025 Midyear (1 Aug 2026) · Minnesota Bureau of Criminal Apprehension, Uniform Crime Report 2025, and the amended report issued via Minnesota Department of Public Safety (Sep 2026) · Star Tribune, Minneapolis vehicle break-in and window-smashing coverage (2025 to Aug 2026), carjackings-by-neighborhood map (2021), "Raise the Age" coverage (2026) · KSTP 5 Eyewitness News, window-smashing and Minneapolis violent-crime coverage (2025 to 2026) · CBS Minnesota / WCCO, Lake Harriet runner assault (2015), Harriet and Nokomis exposure series (2017), Aldrich Avenue robberies (2023), Lake Harriet boat launch shooting (2023), "Raise the Age" coverage (2026) · MPR News, Lake Harriet boat launch shooting (2023) and Loring Park shooting (Sep 2026) · Axios Twin Cities (9 Nov 2021) and MinnPost (Nov 2021), 2021 carjacking wave · Southwest Voices, auto theft and carjackings in Southwest Minneapolis (Nov 2021) · Minneapolis Park and Recreation Board, Park Police and Safety, Public Data, and Park Police Incident Summaries · City of Minneapolis, Precinct 5 and Open Data portal · Hoodline, Elm Creek Park Reserve assault (Aug 2026).

Source tags. [V] verified primary · [S] reliable secondary · [A] analysis · [?] gap. Consumer crime-score aggregators (CrimeGrade, AreaVibes, NeighborhoodScout, minneapoliscrime.com, Safemap) returned mutually inconsistent figures and are excluded throughout. Primary sources and reputable press only. No source, statistic, address or contact in this document is asserted without a traceable basis. Where verification was incomplete it is tagged rather than smoothed over.

Method note. Crime benchmarking follows Minnesota and Minneapolis-Saint Paul first, then national aggregate. Scoring is analyst judgment, not a calibrated instrument. Category weights: Site and Property 25%, Threat Intelligence 32%, Vulnerability and Environmental 43%.

Standing caveat. Absence of news coverage is not confirmation of safety. Every "no incidents located" statement in this document means no incident was reported in an accessible source, and nothing more. Four HIGH-priority collection gaps remain open at Section 08, and the assessment should be read against them.

Typeface. Human BBY 45 Light specified. Body set at 7.95pt rather than the 11pt house standard to hold the scored matrix within the page budget. Substituted at render time where the family is unavailable.
